

Janghyun Noh

Location : Seoul, South Korea
Phone : +82-10-5266-9114
Email : watercar99@naver.com
Website : https://janghyunnoh.github.io/

AI researcher with experience in developing machine learning and deep learning models and analyzing diverse datasets through collaborative research with external institutions. Interested in applying AI to solve real-world problems across different domains.

Education

2026 M.S. in Artificial Intelligence, Myongji University

2022 B.S. in Data Technology, Myongji University

Experience

Sep. 2024 – Aug. 2026

Graduate Researcher

Artificial Intelligence and Data Analytics Lab, Myongji University

- Developed a deep learning model for phenotype prediction from single-cell RNA-seq data, resulting in a first-author publication in Briefings in Bioinformatics.
- Developed a multimodal prediction model using clinical and medical imaging data in collaboration with the Korea Disease Control and Prevention Agency.
- Analyzed diverse biomedical datasets and built an AI agent-based research environment in collaboration with Seoul National University Hospital.
- Built a genomic variant calling pipeline in collaboration with Kyungpook National University.

Dec. 2022 – Aug. 2024

Undergraduate Researcher

Artificial Intelligence and Data Analytics Lab, Myongji University

- Analyzed clinical and genomic factors associated with hypertension using cohort data in collaboration with the Korea Disease Control and Prevention Agency.
- Developed a machine learning model for in-hospital mortality prediction using clinical data and presented the findings at a research conference.

Awards

2026 **Outstanding Research Award**
President of Myongji University

2025 **Best Poster Award**
Korean Society for Bioinformatics (KSBI)

2025 **Best Presentation Award**
Korean Institute of Information Scientists and Engineers (KIISE)

2022 **TriBIG Project Merit Award & Scholarship**
President of Korea Trade-Investment Promotion Agency (KOTRA)
